COMMENTS TO AUTHORS

I read the manuscript with interest as oncological surgeon. Mucosa-associated lymphoid tissue (MALT) lymphoma, is a distinct subgroup of non-Hodgkin's lymphoma (NHL) that accounts for 7-8% of all B cell lymphomas especially in stomach, orbit, conjunctiva, salivary gland, skin, thyroid, lung, stomach, intestine, dura and rarely liver. Although MALT lymphoma are rare, should the memory of them in the case of asymptomatic tumors of the liver. Indeed, it is important to recognize microscopic examination to confirm and implement oncological treatment, including molecular drugs. I do not have substantial criticisms to the manuscript
