COMMENTS TO AUTHORS

In this manuscript, the authors reviewed the various functional roles of Parkin in cancer. The review is informative. It would be grateful to discuss more on the cases in which Parkin activity may be required for KRAS-driven tumors to maintain mitochondrial quality control and buffer oxidative stress, making it a pro-survival protein.

COMMENTS TO AUTHORS

1.The authors had better explain the detail mitophagic pathway from translocation of parkin to surrounding by autophagosome with references. 2.The authors had better explain the association between Atg-5 and -7 to make this article be easy to understand. 3.The authors should provide an expansion for PCNA.
