The application value of alterations in gut microbiota in the diagnosis of IBD is a research direction worth exploring. The research in this paper is more comprehensive and detailed. Objections are: A: Please indicate when biopsies and stool samples are collected. Was the patient received probiotics before taking the sample? What was the medical treatment for IBD patients? Did the CRC subjects undergo radiotherapy, chemotherapy or surgery? B: increasing the number of newly diagnosed cases in recent years if possible. C: Please consider to apply a newer version of SPSS software for statistics.

The classification of IBD and CRC by bacterial biomarkers is unique and seems useful in clinical site. However, the sample number is too small to be accepted. A minimum of 100 patients each is required.
