<input type="checkbox"/> Grade D (Fair)	<input type="checkbox"/> Grade D: rejected	<input type="checkbox"/> Existed	<input type="checkbox"/> Minor revision
<input type="checkbox"/> Grade E (Poor)		<input type="checkbox"/> No records	<input checked="" type="checkbox"/> Major revision

COMMENTS

COMMENTS TO AUTHORS:

Interesting hypothesis, but needs further support from the literature and better explanation since "Eventually, the macrophages will realize that they just cannot get rid of the intruder and call in more macrophages and lymphocytes to quarantine them and thus the formation of granulomas" is not proper scientific writing. Author should try to explain his thoughts in a scientific way and providing support when possible/requested

COMMENTS

COMMENTS TO AUTHORS:

It is an interesting aspect for the pathogenesis of inflammatory bowel diseases. It may be the topic of a further research. Minor Revision: - Please correct the word "granulomatous" in the last sentence.
