<input type="checkbox"/> Grade A (Excellent)	<input checked="" type="checkbox"/> Grade A: Priority Publishing	Google Search:	<input type="checkbox"/> Accept
<input checked="" type="checkbox"/> Grade B (Very good)	<input type="checkbox"/> Grade B: minor language polishing	<input type="checkbox"/> Existed	<input type="checkbox"/> High priority for publication
<input type="checkbox"/> Grade C (Good)	<input type="checkbox"/> Grade C: a great deal of language polishing	<input type="checkbox"/> No records	<input type="checkbox"/> Rejection
<input type="checkbox"/> Grade D (Fair)		BPG Search:	<input checked="" type="checkbox"/> Minor revision
<input type="checkbox"/> Grade E (Poor)	<input type="checkbox"/> Grade D: rejected	<input type="checkbox"/> Existed	<input type="checkbox"/> Major revision
		<input type="checkbox"/> No records	

**COMMENTS TO AUTHORS**

This review is very informative but is difficult to understand because of no informative figures and tables. Please insert some figures to show the molecular mechanism of chronic pancreatitis. I think flowchart supports readers' understands.

**COMMENTS TO AUTHORS**

1. The authors stated that "It is now well accepted that chronic alcoholic pancreatitis results from repeated episodes of acute pancreatitis. This concept is supported by the observation that individuals who suffer frequent attacks of acute pancreatitis progress to chronic pancreatitis more rapidly " The authors should add that there are another option, i.e. that chronic pancreatitis is chronic "ab initio". This point of view should be cited and appropriate references should be added. 2. They also stated that "Therefore, although acute and chronic pancreatitis have different clinical manifestations, the mechanisms by which the disease process is initiated is likely similar.". Please describe the different manifestations. In other word the clinical presentation of acute and chronic pancreatitis is the pain and the other manifestations are due to the different course of the two diseases 3. finally animal model of chronic pancreatitis failed to replicate human chronic pancreatitis. Also this point should be underlines. 4. From these points the paper should be re-written
