COMMENTS TO AUTHORS

It is a very interesting review. the authors should use only one name and it is preferably to use Ulcerative colitis and no colitis ulcerosa Instead of discussion should write a conclusion and to notice in a more particular way the future use of these biomarkers on diagnosis and response to therapy.

COMMENTS TO AUTHORS

ESPS No. 9270 Ms. title: Genetic update on inflammatory factors in colitis ulcerosa: review of the current literature by Sarlos P, et al. General comments: This review summarizes the current literature on inflammation-related interleukin and interleukin receptor gene polymorphisms which are associated with UC, based on an electronic search of Pubmed Database among publications of the last 10 years, using the medical subject heading terms: UC, colitis ulcerosa, ulcerative colitis, inflammation, genes, polymorphisms, and susceptibility. This excellent review article will provide much recent knowledge concerning pathogenesis of UC to the readers of WJG. Specific comments: 1. Figure 1 is black box. Figure 1 does not appeared in this file. 2. It is rather better if the authors briefly discuss the superiority/significance of individual genetic factors.

COMMENTS TO AUTHORS

Dear Editor; In general summary; In this review, authors focused on inflammation-related genes and polymorphisms including interleukin and interleukin receptor gene polymorphisms which are involved in the pathogenesis of UC. This review article is informative about the pathogenesis of UC. the authors should use only one name (Ulcerative colitis). Figure 1 does not seen in this file. In discussion section, Conclusion is more suitable instead of discussion.
