**COMMENTS TO AUTHORS**

The authors demonstrate the problem of the management of postoperative CD patients. This review gives detailed literature analysis on the role of ultrasonography in detection of postsurgical recurrence and correlation with other diagnostic procedures. The title accurately reflects the major topic and contents of the study. The discussion is not well organized and resembles the previous section of paper (literature analysis). Therefore the discussion paragraph has to be revised providing the validate conclusion from systemic theoretical analyses. In conclusion, this is an interesting review but it needs some revisions.
