COMMENTS TO AUTHORS

This is a nice written review about risk factors in IBD with no new fundamental new aspects. It is more applicable for a teaching text book than for an international journal.

COMMENTS TO AUTHORS

The manuscript is a general review about osteopeina and osteoporosis in inflammatory disease. IBD is systemic disease more than a bowel disease. There are growing concerns about the systemic effect or complications of IBD. This review is concise, direct and with clear concept. However, IBD is not a common disease in eastern countries. There must be differences between eastern or western counties. The authors may give some statements about this. This review may give information to general physician and gastroenterologis.
