COMMENTS TO AUTHORS

The authors are presenting interesting and clinically relevant text. The single issue I like to point out is that the impact of this article should significantly benefit from a thorough language editing by a well-informed academic whose native language is English.

COMMENTS TO AUTHORS

Thank you for your excellent and up-to-date review regarding small bowel neuroendocrine tumors (NETs) from pathophysiology to clinical approach. For better understanding of your article, make a few tables to summarize the contents and figures. I hope to get your sincere reply soon, on the following comments.

COMMENTS TO AUTHORS

The Authors in the manuscript entitled "Small bowel neuroendocrine tumors: from pathophysiology to clinical approach" present selected issues connected with small bowel NETs, focusing on review of recent research studies and its potential application on clinical practice. They widely described the most significant hypotheses in pathophysiology of small bowel NETs. The authors evaluated the actually used classifications, diagnostic methods and treatment. They emphasized the possibility new treatment options of NETs, based on new research breakthroughs. In my opinion presented manuscript can be published after minor linguistic revisions. Minor errors: 1. In my opinion the manuscript needs to should be revised carefully once again, because some minor linguistic errors. 2. In my opinion the scheme/table showing the possible treatment options (actually used and future) of small bowel NETs will be a big advantage of manuscript. The scheme showing possible pathogenesis of NETs also could be useful.
