COMMENTS TO AUTHORS

Well written paper. The authors are certainly aware that PPR-gamma behaves in the colon as a potent differentiating agent, its expression being maximal at crypt base, to only cease while moving to the crypt head. Mesalamine, its perfect pharmacological ligand, seems to exert its anti-inflammatory and anti-cancer activity in IBD thanks to its ability to bind and activate PPR-gamma. Could the authors envisage and speculate on any link or implications of these colon facts with their gastric findings ?
