COMMENTS TO AUTHORS

To the authors, Your manuscript is an interesting work. However, I have some concerns as listed below: 1. Please, take care at abbreviations, some are missing (e.g., MLN in abstract) 2. A few more aspects or additional references should be provided for the description of the colitis induction. 3. On the histological analysis please provide some supplementary control data, pictures on how the specimens looked. 4. Discussion section: can you please speculate in a addition phrase about the relevance of another inflammation-related process (e.g oxidative stress) in the context of inflammatory bowel diseases in the present literature? 5. Why is Acknowledgments section empty? Should it be deleted if there is no one to acknowledge... 6. English should be double check : for example, some phrases are incomplete “The purpose of this study was to investigate whether oral tolerance is inducible in the active phase of DSS colitis, and how cytokines and regulatory cells, such as Foxp3+ T cell and B10 cells, which are associated with oral tolerance change during colitis in mesenteric lymph nodes (MLN) and the spleen...???” 7.

COMMENTS TO AUTHORS

The paper of Ino S et al deals with tolerance induction in the DSS colitis model. This paper is descriptive and provides evidence that during the DSS-induced colitis, oral administration of Ovalbumin induces subsequent tolerance to systemic OVA administration. In addition the authors tried to make a link between oral tolerance and the numbers of Treg and B10 cells. major concerns: 1. can the authors justify the use of Ovalbumine and not colon extract proteins ? 2. can the authors provide evidence that the Ova- specific T cell is also decrease following oral therapy ?

COMMENTS TO AUTHORS

This study is adequately conducted and well written. It is worth publishing in WJG.
