COMMENTS TO AUTHORS

Dear Author This paper is review of esophageal caustic injury. Author write pathophysiology, clinical presentation ,diagnosis and various kinds of treatment for esophageal caustic injury. Please write detail comment of each session. For example, "esophageal carcinoma is a well known sequel of corrosive ingestion. There is a 1000-3000 fold increase in the incidence of esophageal carcinoma, and up to 3% of patients with carcinoma of the esophagus may have a history of caustic injury in your paper." I think the esophagus can be damaged by exposure to chemicals. Drinking a caustic chemical such as lye can lead to strictures (narrowed areas) in the esophagus. SCC of the esophagus can occur in these strictures many years after the chemical injury. I ask question. 1. Please comment the pathophysiology of esophageal cancer after esophageal chemical injury. When will esophageal caustic injury patients suffer from esophageal cancer? 2.In surgical treatment ,please comment about the merit and demerit of surgical treatment, colon interposition. gastric pull up for the stricture after esophageal caustic injury..
