

PEER-REVIEW REPORT

Name of journal: World Journal of Radiology

Manuscript NO: 66544

Title: Neonatal infratentorial subdural hematoma contributing to obstructive hydrocephalus in the setting of therapeutic cooling: A case report

Reviewer's code: 05410953

Position: Peer Reviewer

Academic degree: MD, PhD

Professional title: Associate Professor, Chief Doctor

Reviewer's Country/Territory: Spain

Author's Country/Territory: United States

Manuscript submission date: 2021-03-30

Reviewer chosen by: AI Technique

Reviewer accepted review: 2021-04-03 10:00

Reviewer performed review: 2021-04-12 06:24

Review time: 8 Days and 20 Hours

SPECIFIC COMMENTS TO AUTHORS

Authors present a very interesting case of perinatal symptomatic subdural hematoma (SDH) diagnosed after a cesarean section delivery in a term pregnancy. The relationship between HIE and treatment by means of therapeutic hypothermia with SDH is well exposed, and figures demonstrate the findings in this case report. At the Case Presentation authors describe: "A boy was born at 38 weeks and 5 days via emergent C-section for prolonged decelerations". This is the unique information about the pregnancy and delivery, and I would like to know more about the indication for finishing pregnancy, specific maternal risk factors during pregnancy or weight of the newborn that could justify the FHR abnormalities (prolonged decelerations).
