<input type="checkbox"/> Grade A (Excellent)	<input checked="" type="checkbox"/> Grade A: Priority Publishing	Google Search:	<input type="checkbox"/> Accept
<input type="checkbox"/> Grade B (Very good)	<input type="checkbox"/> Grade B: minor language polishing	<input type="checkbox"/> Existed	<input type="checkbox"/> High priority for publication
<input checked="" type="checkbox"/> Grade C (Good)	<input type="checkbox"/> Grade C: a great deal of language polishing	<input type="checkbox"/> No records	<input type="checkbox"/> Rejection
<input type="checkbox"/> Grade D (Fair)		BPG Search:	<input type="checkbox"/> Minor revision
<input type="checkbox"/> Grade E (Poor)	<input type="checkbox"/> Grade D: rejected	<input type="checkbox"/> Existed	<input type="checkbox"/> Major revision
		<input type="checkbox"/> No records	

## COMMENTS TO AUTHORS

The article is clear and well written. The statistical analysis appears to be valid and supports the conclusions. But the admission criteria to the ICU are not listed. Also, the grouping of transfusions seems somewhat artificial. The authors do not describe how many of these patients had nuclear scintigraphy. These results are not surprising are consistent with other reports.

## COMMENTS TO AUTHORS

I read and review the manuscript entitled Factors Influencing the Yield of Mesenteric Angiography in Lower GI Bleed. I agree with authors that the mesenteric angiography in lower GI bleed continues to be an open problem in general surgery. This paper is very attractive and useful and my opinion is to accept them without changes.
