COMMENTS TO AUTHORS

1. In this case, the authors should describe adverse effects of percutaneous thrombin embolization. If no adverse effects, you should describe that there were no adverse effects of this procedure. 2. On Figures 3A and B, the authors showed B-mode US (3A) and color-Doppler US after percutaneous thrombin injection. If possible, you had better add the color-Doppler US before this procedure. 3. On Figure 4, the authors described axial CT angiography showing pancreatico-duodenal artery pseudoaneurysm 1week after the treatment. Did you perform the CT angiography (CT during arteriography) using the Seldinger technique? Dynamic or enhanced CT? 4. In the Discussion section, the authors described the explanation about two new agents used for endovascular treatment of aneurysms and pseudoaneurysms. However, these sentences are not important in this manuscript. The authors should delete these sentences. 5. Table 1 presents an overview of the literature in patients with peripancreatic pseudoaneurysms who were treated by percutaneous thrombin embolization. The data such as age, gender, size of pseudoaneurysms, and adverse effects of this procedure should be required. 6. There are some spell mistakes. Please check up.

COMMENTS TO AUTHORS

1. There were some words typed errors that should be corrected (highlighted in red). 2. Possible adverse events following Thrombin injection to target vessel should be mentioned such as visceral artery occlusion.
