COMMENTS TO AUTHORS

This is a well-written, image-rich manuscript. My only minor concern is the format. It appears to be a hybrid between a review and a pictorial essay. I'm not sure if this publication has the freedom to publish a manuscript that does not fit into a well defined category.

COMMENTS TO AUTHORS

This is a detailed review of Small Bowel Carcinoid Tumours and the role of CT scan in lesion detection and staging. As a review of already existing literature and an interesting CT description of different presentations of Small Bowel Carcinoid Tumours, it has a potential for publication.

COMMENTS TO AUTHORS

Dear authors, some corrections throughout the manuscript with regard to grammar and an additional revision on literature from 2014/2015 might improve the manuscript's quality. Please comment on potential diagnostic improvement using state-of-the art CT technique, i.e. 256-/320-/DSCT/volume scanners of different vendors. Please comment on the "use of a negative endoluminal contrast agent with good bowel distention of the small bowel" within the paragraph of your institutional imaging protocol! How do you perform it? An additional paragraph concerning diagnostics from nuclear medicine, and abdominal MRI (MR enterography/diffusion weighted imaging), in small bowel carcinoids (NET) might enhance the reader's knowledge.
