COMMENTS TO AUTHORS

The DWI is a beneficial topic and is routinely used in daily practice. However, to be more helpful some corrections should be done in this minireview. 1. The title might be changed as the review described the importance of DWI in gynecological malignancies. 2. The DWI protocol of MRI in pelvis should be mentioned in the form of a table. 3. Sarcomas were discussed only in one sentence. They should be described more comprehensive in a separate title. 4. PET and DWI might be compared as statistical in whole body screening for metastases. And the benefits of the DWI in the staging of endometrial ca might be described as statistically.
