COMMENTS TO AUTHORS

- A table containing predictive values for the mentioned evaluations and indications would be useful
- Description of the technique depends on the compartment; for the anterior compartment bladder filling is useful. The review should include a short comment on prolapses of the middle and anterior compartment as this is a major differential diagnosis, sample figures should be added - figures could be of better quality (maybe due to the printing) and anatomical structures should be named in every figure - use pictures instead of text for the description of the compartment

COMMENTS TO AUTHORS

Manuscript 20150404003502 This is a nice review on "current applications of transperineal ultrasound in gastroenterology". It is well written and references are updated. It provides the readers a comprehensive overview. The only limitation are the poor quality images. We strongly recommend to add more images and more labels and arrows to help in understanding.
