COMMENTS TO AUTHORS

General Comments The review is given of the features of aneurysms of cardiovascular system, and demonstrated a lot of cases with uncommon aneurysms by means of CT and MRI, images of which are now very useful for diagnosis. This review is written very well particularly also regarding treatment of aneurysm, and acceptable from my point of view. Minor Comments 1. Please, explain abbreviations when they first occur in the text. For example, CT, MRI, TAAs, SVC and etc. Some abbreviations are spelled out after the first appearance. For example, CT, MRI, SVC etc. 2. Abstract: The phrase “Although aortic aneurysms are the most common are the most common type encountered clinically,” should be corrected. P15: “septum nto the right ventricle” “Surgical treatment can be be considered it there are associated complications or hemodynamic abnormalities.” P17: “pulmonic vale” “Superior venacava Aneurysm”

COMMENTS TO AUTHORS

This is an excellent review about the epidemiology, clinical presentation and complications, imaging features and relevant differential diagnoses, and management of a series of uncommon cardiovascular aneurysms. I have a few minor comments about this manuscript. Please consider the following comments. (Comments) 1. Page 2, Abstract, line 1 Correct "aortic aneurysms are the most common are the most common type" to "aortic aneurysms are the most common type". 2. Page 15, line 4 (Ventricular septal aneurysms, line 8) Correct "septum nto the right ventricle" to "septum into the right ventricle".

COMMENTS TO AUTHORS

The paper is not well organized. Readability of the paper should be improved. ?Language of the study should be completely revised. Long sentences cause to hard understandable. References should be current and updated.
