COMMENTS TO AUTHORS

This is a comprehensive review of hydatid lung disease. One missing paragraph is the differential diagnosis of this disease. This review is all written from a perspective that you KNOW the etiology of the findings, but cystic changes in the lungs can have other causes that one would need to consider (e.g. lung abscess due to other causes, necrotic malignancy, etc.).

COMMENTS TO AUTHORS

A clearly written paper focusing on thoracic involvement of hydatid cyst. The paper should undergo English linguistic revision before publication. I recommend the authors to mention and cite a manuscript below which demonstrates the CT and MRI findings in intrabiliary rupture of hydatid cyst. Cases J. 2009 Mar 10;2:6455. doi: 10.1186/1757-1626-2-6455. Intrabiliary rupture of liver hydatid cyst: a case report and review of the literature. Avcu S1, ünal ?, Arslan H.

COMMENTS TO AUTHORS

This is a nice review summarizing the imaging features of the pulmonary hydatid disease. It is well written up. The CT signs are quite numerous and difficult to keep in mind by reading the text. If possible, I'd add some drawings illustrating them. This might improve the quality of this review. Minor comments Clinical features and complications: I'd delete "into biliary tree" as the review is now focused on the lung involvement. Imaging features: the first sentence sounds a bit contradictory as the lung is the second most common involved organ 2.2 and 2.3 paragraphs have similar titles. Can you slightly modify the 2.3 one to make this distinction clearer? Fig.1b: do the left cysts show other specific features? E.g. the largest one seems including a smaller cyst
