

ESPS PEER-REVIEW REPORT

Name of journal: World Journal of Radiology

ESPS manuscript NO: 25139

Title: Evaluation of DNA synthesis with carbon-11-labeled 4'-thiothymidine

Reviewer's code: 00225366

Reviewer's country: Canada

Science editor: Xue-Mei Gong

Date sent for review: 2016-02-27 13:50

Date reviewed: 2016-04-02 02:16

COMMENTS TO AUTHORS

The author gave a review on using the PET to study the DNA synthesis rate in cancer. This is a timely topic and should benefit the readers of WJR. I only have the following comments for further improvement: 1. Some paragraphs reviewing the basic principle of DNA synthesis rate measurement using the PET and C-11 compound are needed. 2. More clinical case review with respect to each cancer site should be added. 3. More figures concerning only one cancer site should be added showing how the measurement can help in the diagnosis of cancer.

COMMENTS TO AUTHORS

This is a well-written paper. The word "researchers" in the core tip should be "research" rather than researches.
