COMMENTS TO AUTHORS

This manuscript provide important information regarding proton magnetic resonance spectroscopy imaging (1H-MRSI) and 18F-FDG-positron emission tomography (18F-FDG-PET) in local prostate cancer.

COMMENTS TO AUTHORS

Dear authors, the topic is actual and interesting; however 22 patients represents a too small sample to rule out significant results. Moreover, PET-TC scan would not probably be routinely available in most centers, and costs might be too expensive. In addition, its low sensitivity for localised primary prostate cancer detection is already wellknown.
