SPECIFIC COMMENTS TO AUTHORS

Dear author, The paper represents the clinical case which is aiming to share the clinical data of the healthy 39-year old male, presenting with chest pain in the setting of documented Salmonella Typhimurium infection. The article is written with the good English-speaking adduction of the arguments. The article is sufficiently novel and very interesting to warrant publication. All the key elements are presented and described clearly. The most discussable options in the article are: 1) Please, emphasize the point of antiplatelet and anticoagulation therapy in such a case. Here must be also underlined how impaired the function of the liver is. Would you kindly elaborate those relevant options. 2) There must be more available info on the long-term follow-up in such patients including risk of any MACE even stroke.
