## COMMENTS TO AUTHORS

Dr. Kumar and colleagues presented a very interesting and excellent case report on the diagnosis of acute myocarditis using CMR imaging of a patient with intense on-and-off chest pain. Overall, the case report is well written, comprehensive, appropriate referenced and concise in its content. There is no criticism.

## COMMENTS TO AUTHORS

Nice case report, uncommon presentation for acute myocarditis mimicking acute myocardial infarction due to coronary vasospasm. Relevant clinical value with regard to differential diagnosis. Substantial points to be addressed: 1) To validate the diagnosis of coronary vasospasm (it is mandatory) more information should be added, more specifically it is questionable that coronary angiography was normal during angina and vasospasm; if so please clarify, otherwise specify timing (angina / vasospasm vs. CGF) 2) The diagnosis of myocarditis has been made only by CMR? Please clarify / confirm. Minor issues relate to the language: Abstract: last line: with ST-segment elevation and suspect of MI Introduction: the second sentence is not clear and should be rewritten. Discussion: "Also making and..... subsequent sentence.....: should be re-written as it is not clear.

## COMMENTS TO AUTHORS

Very interesting case. Well referenced. Discussion is somewhat redundant; I would end the case report after the sentence "and thus allowed for establishing the diagnosis of acute myocarditis. 3-5".
