COMMENTS TO AUTHORS

This is a very well written review on multimodality imaging in apical hypertrophic cardiomyopathy. It summarized characteristics of various imaging modalities for a diagnosis of apical hypertrophic cardiomyopathy. I have no comments.

COMMENTS TO AUTHORS

The authors review the detection methods of apical hypertrophic cardiomyopathy. The article is well organized; the authors performed a thorough literature search; the information is comprehensive and up-to-date with the latest developments. Few grammar errors should be corrected.

COMMENTS TO AUTHORS

Parisi et al. reviewed the different imaging techniques used for the diagnosis of AHCM and their role in the detection and comprehension of AHCM. Although this review is interesting, I have some comments for the review. 1. Table of comparison of the characteristics of the methods will be appreciated. 2. Images of SPECT and MDCT will be appreciated. 3. Figures should be linked to the body of the text. Please indicate the linked site in the body of the text. 4. Figure legends should be more informative. And important findings should be emphasized using arrows. 5. Modality used for the Figure 3 should be specified in the legends.
