COMMENTS TO AUTHORS

Congratulations to the authors. The manuscript merits publication without modifications. My only suggestion could be to insert a few lines regarding the Stentys stent to avoid late malapposition and the MGuard stent to prevent distal embolization.

COMMENTS TO AUTHORS

Interesting topic, of great everyday practical importance for cardiologists, heart surgeons and patients. The article comes to elucidate a gray area (how helpful are drug eluting stents?) troubling physicians who hold posts that require correct decision making. For this reason I recommend the acceptance of the paper. As I am not a native speaker, I would ask for an extra English language polishing.

COMMENTS TO AUTHORS

It is a review article for DES treating STEMI. Generally, the article make a good summary in this field.

1. The abbreviation of ST (stent thrombosis) will confuse with the ST of the term of ST-segment. 2. p7: sirolimus-eluting stents should use as abbreviation. (SES) 3. There are lack of the pathophysiology of less stent thrombosis for 2nd generation DES in comparison with 1st generation DES and BMS.

COMMENTS TO AUTHORS

Well written paper dealing with a hot topic. The manuscript should be revised by an English mother-tongue expert
