## COMMENTS TO AUTHORS

This is an interesting and well written paper regarding the possible implication of HIV infection, treatment for HIV and cardiovascular disease risk, giving insight for future research and providing a proposal for screening algorithms for cardiovascular risk assessment in HIV patients. The manuscript would benefit from the following: 1. Please provide 4-5 more figures illustrating the valuable information described. For example a figure highlighting the screening algorithms for CVD risk stratification in HIV patients (pages 14-16) and another one (pages 7-10) linking CVD risk and HIV infection and treatment at a possible MOLECULAR level, highlighting the theories, instead of just reporting studies, as previously. 2. Please add 3-4 tables.

## COMMENTS TO AUTHORS

The manuscript gives a review of spreading cardiovascular disease in HIV infected patients. The paper is well written and addresses an important field. As this manuscript is very long a better structure by the use of tables and a meta-analysis of existing studies would be helpful. Furthermore a algorithm of identifying HIV patients with high risk of cardiovascular disease.

## COMMENTS TO AUTHORS

Good job. Nothing to add.
