## COMMENTS TO AUTHORS

Comment on the manuscript ESPS Manuscript NO: 20651 Title: Renal function assessment in atrial fibrillation: usefulness of CKD-EPI versus re-expressed MDRD-4 written by Rami-Riziq Yousef Abumuaileq. First of all I would like to congratulate the authors with their achievement. In this retrospective study including relatively limited sample size of Caucasian subjects, the findings encourage the use and application of the new CKD-EPI equation for assessment not only of renal function in patients with non-valvular atrial fibrillation but also in all clinical situations. References 10, 11, 12 and 13 are missing in the text. Please reconsider insertion of the references. With kind regards, 00211908

## COMMENTS TO AUTHORS

For the first time, Abumuaileq et al evaluated the re-expressed MDRD-4 and the new CKD-EPI formulas at predicting the occurrence of major adverse outcomes in a real world cohort of patients with non-valvular atrial fibrillation. The study was well conducted and clinically relevant.
