COMMENTS TO AUTHORS

Comments on the manuscript ESPS Manuscript NO: 17801 Visualization of catheter ablation for atrial fibrillation: impact of devices and anatomy written by Mark A. Benscoter, MS and Paul A. Iaizzo. This manuscript is dealing with and reviewing very interesting issue of visualization of cardiac structures and the impact of medical devices and anatomy on cardiac catheter ablation. It compasses the sites and devices used for diagnostic and therapeutic procedures: their limitation and the development required to increase the functionality of the current devices. They described extensively the various steps involved in the ablation procedure and the variable shapes, diameters and sizes of the anatomic structures (valves, ridges, appendages, ostia, bands, muscles, vestibules). Number ID: 00211908

COMMENTS TO AUTHORS

The article provides a good overview over new devices for catheter ablation of atrial fibrillation.

COMMENTS TO AUTHORS

The authors should be congratulated for their review and great images of the heart of particular interest for electrophysiologists. I would just ask for a little more information about the used methods: Visible Heart method and fresh human hearts reanimated, as I think the readership would be grateful for that.
