COMMENTS TO AUTHORS

Dear Editor: The review paper was well written. There were only few minor issues needed to be revised.

- In page 7, (reference 35) Filippi et al demonstrated an increased risk of adverse effect of propranolol use in preterm infant. However the context did not highlight the issue that the preterm infant may not be appropriate for systemic propranolol use and instead a topical betablocker may be an alternative selection in the specific population.
- In page 10. the term "based off of" is relatively informal in the academic journal. Please revised it to "based on".
- Please add a figure to illustrate a suggested flow using propranol to treat infantile hemangioma by when and how long...,which may make readers more clear for the up-to-date treatment.

COMMENTS TO AUTHORS

The manuscript by Fernandez-Pineda et al. aimed to update the knowledge regarding the beta-blockers used in the treatment of children with infantile hemangioma. This review manuscript was well-written. The reviewer only has some minor suggestions as listed below. There were some inconsistency in the style of References; especially Ref 5, 13, 14, 16, 19, 39, 44, 45, 51. Please carefully recise these errors.
