COMMENTS TO AUTHORS

Dear Editor: Dr. Bhardwaj and colleagues wrote an interesting case of pulmonary vein thrombosis in a patient with Polycythemia Vera on regular warfarin treatment. In general the case was well written. Some minor issue should be addressed. 1. Since the patient received anticoagulation therapy and achieved the goal of INR, other effective management such as cytoreduction should be considered for the patient. (De Stefano haematologica | 2008; 93(3)). The patient should suggest some ways to the reader for preventing recurrent thrombosis in such a patient. 2. The sequence of figure number was not emerged in order, please revised this. 3. In figure 3 a typo was noted: PVT(pulmonary "Veon" thrombosis).

COMMENTS TO AUTHORS

Dr Bhardwaj and colleagues have introduced the first case of concomitant PVT and polycythemia in their manuscript: "Pulmonary Vein Thrombosis in a Patient with Polycythemia Vera". The topic is important to every clinician who is involved in cardiac diseases in daily practice as the most important issue in diagnosis of this problem is strong clinical suspicious that has been emphasized by the authors. The report has been completed by good discussion. However, the authors have not approached to the uniqueness of their case (ie polycythemia). I recommend adding one or more paragraphs to clarify characteristics and probable special management of patients with polycythemia. I would focus certainly on differences in anti-coagulation. Key words are better to be selected from MeSH. So change "pulmonary vasculature".

COMMENTS TO AUTHORS

The present report is valuable to recognize PVT which is a rarely encountered disease but has significant clinical presentations. 1. The authors should show a figure of CT angiogram after the resolution of PVT to prove the intra-PV tumor to be thrombus. 2. The authors should discuss regarding PVT in polycythemia vera. 3. There are many abbreviations in the text, and they should be initially spelled out. 4. Figure 4 should be presented table 1.
