COMMENTS TO AUTHORS

The authors present 2 rare case reports of coronary subclavian steal syndrome after coronary artery bypass graft. The authors have demonstrated that interventional treatment may lead to complete resolution of symptoms and possible prevention of ischemic complications. This manuscript is nicely structured and well written. The following are minor comments. (Comments) 1. References [6] 2014;19:289-296 [8] Catheter Cardiovasc Interv 2002;56:162-165

COMMENTS TO AUTHORS

Nice cases of coronary steal, paper is well written and images speak by themselves. Minor issues: I have not seen the online videos. Apparently they have not been uploaded into the system (do not appear in the system). Main issue to discuss is whether in case 1 PCI of left main should be performed first or after stenting of the subclavian stenosis in the event symptoms or ischemia in anterior region persists. Please elaborate on that.
