COMMENTS TO AUTHORS

The authors studied clinical and epidemiologic features of patients with TGA in Nigeria and reported that TGA is common congenital heart disease in Nigeria; palliative and definitive interventions are not available for TGA in Nigeria; and there is an urgent need to establish pediatric cardiac centers in Nigeria. The paper is well-written and provides current status of medical care for TGA in Nigeria. 1. The introduction is too long and has detailed information about TGA that should be described in the discussion. Please revised it.

COMMENTS TO AUTHORS

The author is to be congratulated on the challenging task to describe occurrence and treatment of TGA in Nigeria. I have some comments: - Table II: please report x2 and p-value for the total population. - Patients received ACE-inhibitors; do these work in this black population? Please comment. - What was the outcome for patients not undergoing surgical correction? Where were patients undergoing surgery operated?
