COMMENTS TO AUTHORS

I read with great interest this review. I believe it is well-written and the message is clear to the reader. The subject will be very interesting to a broad readership. The Authors should add references to the statement that "Diet is the primary route of exposure to pollutants...", at page 10. A comment regarding the comparison (qualitative and quantitative) with other route of exposure to pollutants with endocrine disrupting activities, would be interesting. The Author might want to write a paragraph on this, and possibly a table/figure).

COMMENTS TO AUTHORS

1) As a suggestion, In Table 1, the formulae of the various examples of pollutant chemicals, could be added to the box describing the corresponding chemical.
