SPECIFIC COMMENTS TO AUTHORS

It is a very well written brief analysis of a hot topic in colorectal cancers. The manuscript may help the scientific community of interest, to easily understand and summarize recent developments on the topic. I have no review suggestions.

SPECIFIC COMMENTS TO AUTHORS

1.This topic is interesting although there were a lot of reviews or meta-analysis about the stenting for left side colon cancer obstruction. 2.Since the aim of this review is to review the literature published in recent 2years, it should be marked in the title of this manuscript. 3.The guidelines, endoscopic techniques, the short- and the long-term outcome were descripted thouroughly in this review, while the laboratory research works reported in recent 2 years (such as the cfDNA, circulating tumor cells , and pathological studies involving the PNI and stenting) deserved to be listed out as an independent issue and to be discussed.
