SPECIFIC COMMENTS TO AUTHORS

"Low-Grade Myofibrosarcoma of the Maxillary Sinus: A Study of Two Cases and a Literature Review." This article presents two exceptionally rare instances, accompanied by a review of prior literature, offering significant insights. The content is highly informative. Nevertheless, before publication, several revisions are required: 1. The figures and tables must be sequentially numbered and referred to in the text at the points where their content is discussed. 2. The manuscript contains several errors in English that need correction: In "Case Presentation," third paragraph, second line, the placement of the abbreviation "(MRI)" seems incorrect. In the same section, sixth paragraph, fifth line, the article "A" is extraneous and should be removed. In the "Procedure" section, first paragraph, fifth line, the fragment "bserved" is evidently a typographical error and should be corrected to "observed." In Table II, the term "Obserwation" is misspelled; it should be amended to "Observation" in both occurrences. 3. Despite being low-grade, this disease may prompt early recurrence or distant metastasis, leading to premature mortality. The authors are encouraged to elaborate on their views or theories explaining this disease's aggressive behavior.
