<input type="checkbox"/> Grade E (Poor)	<input type="checkbox"/> Grade D: rejected	<input type="checkbox"/> Existed	<input type="checkbox"/> Major revision
		<input type="checkbox"/> No records	

COMMENTS TO AUTHORS

This is a paper of literature review, coupled with a theory of how they want to publish. I think it is necessary to make some corrections for its publication.

- In the Abstract the author indicated that he will review the literature about HPV and cervical cancer, but do not describe the theory that they will apply. It would be advisable to add the information to give a complete idea of the purpose of the paper.
- Figure 1 has no figure caption and is very complex and is not fully explained in the text. It is recommended to reduce the complexity of the figure, to that which is relevant to the paper or explain it entirely in a figure caption in the text and add its contents.
- Figure 2 does not have a figure caption, but is again very complex and does not adequately describe the figure caption or in the text. As in figure 1 it is recommended to have content uniformity.
- Sometimes the author's name is a reference type and sometimes only the reference number is set, it is recommended to standardize.
- Sometimes reference directly send to figure and sometimes it is put between parentheses. It is recommended to standardize.
