COMMENTS TO AUTHORS

This is an interesting manuscript which provides information and justification for FDG PET-CT in evaluation of locoregional nodal disease for initial staging of breast cancer. It is well written and would be of interest to the clinical practitioners that read the journal.

COMMENTS TO AUTHORS

This manuscript gives important message to the readers about FDG PET-CT in evaluation of locoregional nodal disease for initial staging of breast cancer. If the author prepare a table about IMN positive and axilla status the manuscript will be more impressive. Also six case could be omit

COMMENTS TO AUTHORS

Author said FDG PET-CT is a good tool in evaluation of locoregional nodal disease for initial staging of breast cancer. Positive axillary FDG PET/CT is a good predictor of axillary disease and correlates well with SLNB. But they don't mention about false positive and false negative...if FDG PET-CT may be examined, is it real not to need biopsy..

COMMENTS TO AUTHORS

I would like to tell to the author that consider write before abbreviation FDG the all name because only this is cited in the introduction and it is not at abstract and title
