COMMENTS TO AUTHORS

the authors have presented an unusual case of a sarcoma arising in a pulmonary artery. These vascular sarcomata are rare and each brings it's own difficulties. No centre will ever have enough of such rarities to manage a series and the authors have demonstrated that such tumours can be sensitive to radiotherapy. There is an interesting message in this case. The manuscript is well written, there are one or two small changes that are needed to make this publishable but overall it is worthy of publication.

COMMENTS TO AUTHORS

Figures 1 and 3: The imaging technique used should be stated in the figure legends. Figure 2: "Immunohistochemical stainings" -> Immunohistochemical stainings. The power of magnification should be given for all images. Who wrote the section "Peer Review"? The sentence "We report an uncommon case..." leads to the impression that it was written by the authors themselves. Some language polishing is required.
