SPECIFIC COMMENTS TO AUTHORS

The authors have conducted an important study to determine the outcomes of total joint replacement in liver transplant recipients. I have following comments regarding the manuscript.

1. Please mention the inclusion and exclusion criteria in details. For example, were patients with combined liver and kidney transplants included in this study?
2. Please compare the indications of total joint replacement between the two groups.
3. Please compare important preoperative and intraoperative variables such as BMI, preoperative comorbidities, degree of immunosuppression, time interval between the liver transplant and joint replacement, performance status of the patient before joint replacement, liver and kidney functions of the patients before joint replacement, intraoperative blood loss, etc. between the two groups to overcome the potential bias by confounding factors.
4. Please cite the tables at the appropriate places in the manuscript.
5. Please mention the duration of the hospital stay of the two groups.
- 6.

SPECIFIC COMMENTS TO AUTHORS

Well-written article, sound scientific quality. Minor revision was recommended, including analysis of risk factors for renal complications such as NSAID prescription. I also felt a Table should summarize the findings. I congratulate the authors on this well-written article, with sound scientific quality. I recommend including analysis of risk factors for renal complications such as NSAID prescription. I also missed a Table to visualize your findings.
