COMMENTS TO AUTHORS

Congratulations on your interesting study. I have some concerns to be addressed: Lines 42 and 87: Classically, ruptures are considered chronic after 3 months of evolution. Line 96: What were the criteria to do the diagnosis of chronic rupture by MRI? Who confirmed the diagnosis in the MRI scan? A radiologist or an orthopedic surgeon? Line 146: Statistical analysis must be inserted at the end of Material and Methods. Have you any experience with other reparative techniques? Could your good results be due to the promptitude in repairing your cases?

COMMENTS TO AUTHORS

Congratulations for your outstanding technique . I believe you can use the same fixation device in other difficult soft tissue damages .
