COMMENTS TO AUTHORS

The authors described a patient with MRSA infected gluteal compartment syndrome, who developed rhabdomyolysis and acute kidney injury. This case is interesting. However, some minor revisions should be needed. Case report 1. Did you examine serum or urinary myoglobin levels of the patient? 2. page 4, line 68: Please add a space between "Plantar" and "flexion" Discussion 3. How did MRSA infection to the intramuscular hematoma develop in this patient? 4. page 7, line 153: Please delete " a trigger" References 5. Journal title should be in its abbreviated form as shown in PubMed. Please provide the PMID number and the DOI name.

COMMENTS TO AUTHORS

A fascinating recounting of a well managed complication of exercise that may have resulted from a rare, though as yet unidentified genetic predisposition to bacterial sepsis. It might prove worthwhile to retake the patient's history focusing on what might have been prior episodes of bacterial sepsis following trauma or detistry.

COMMENTS TO AUTHORS

The manuscript on the management of the gluteal compartment syndrome due to MRSA infection and abscess is interesting, well-written and does have educational value to both practicing and trainee surgeons. There are issues with punctuations and abbreviations, which need to be amended. References need to cite in the journal format. Shortening the paper would make it read well.
