## COMMENTS TO AUTHORS

Comments: 1."... the focus is now on to minimize toxicities -like chemotherapy related, radiotherapy related..." - What about fertility preservation in these adolescents and young adults? This large field is completely overlooked. What are the consequences of chemotherapy on the gonads and the suggested modalities to minimize these remote and devastating side effects? 2.The possibility of ovariopexy before pelvic irradiation needs to be discussed. 3. Does Ewing Sa metastasize to the gonads? It is relevant for ovarian cryopreservation. 4. What about minimizing the gonadotoxic effect of combination chemotherapy, using GnRHa Cotreatment? 2. Please define tumor "respectability".

## COMMENTS TO AUTHORS

This review provides a very updated and comprehensive evaluation of the incidence of Ewing sarcoma and associated tumors and complications, the new avenues available in terms of therapeutic approaches, including the short- and long-term beneficial effect of new chemiotherapeutic agents, and surgical removal of single metastasis and the prognosis in terms of life expectancy and quality of life.

## COMMENTS TO AUTHORS

The paper is about an important topic. It is well written and balanced. I believe it will be of interest for the Journal's readership.

## COMMENTS TO AUTHORS

The Table 1 should include information in which the readers could understand conceptual shift from adjuvant to neoadjuvant settings.
