### COMMENTS TO AUTHORS

This is a well written paper and well organized study. The authors have explored some of the reasons why patient satisfaction varies among individuals and identified preoperative traits that may be contributing factors. Congratulations on completing this interesting paper. The graphs are appropriate and helpful and the bibliography is complete.

**COMMENTS TO AUTHORS**

This manuscript aims to evaluate factors predict satisfaction post total joint replacement. I have a number of criticisms as follows; 1. Sample size must be calculated based on primary outcome and objective. 2.The objective of the study must be consistent in both abstract and introduction part. 3.The final model is quite complicated not appropriate for clinical practice. 4.The authors should make an explanation or postulation on the result of the study and also the clinical implication. 5.Conclusion must be concise and not extrapolate from the results of the study, 6.References must be checked in both format and validity such as reference number 12,13,16,22,29.
