COMMENTS TO AUTHORS

This is an interesting case report on the anesthetic management of bronchoscopic amniotic membrane grafting. The procedure is new for this kind of application and thus the paper is original and has merit. The report will be a useful reading for all anesthesiologist involved in lung surgery. The manuscript is well written and easily readable. There is no concern with ethical aspects.

COMMENTS TO AUTHORS

General comments (1) The importance of the research and the significance of the research findings This is important in terms of describing the case report of the anesthesia for amniotic membrane grafting to treat non-healing bronchial dehiscence. (2) The novelty and innovative nature of the research This is an innovative research describing the rare case of anesthesia for amniotic membrane grafting to treat non-healing bronchial dehiscence, (3) The quality of the manuscript's presentation and readability It is the case report described in detail. (4) The ethics-related aspects of the research N/A Specific comments Title: It accurately reflects the major topic and contents of the study. Abstract: It appropriately describes about the content of the manuscript. Introduction: The points to consider in lung transplantation are described well. Case Report: The case about the patient with lung transplantation is reported. The dose of the medicines may be checked again. Discussion: Please clarify the meaning of the sentence in page 9 describing "Our patient's existing tracheostomy lent itself well to inhalational induction with sevoflurane." References: Please check the reference numbers in the manuscript carefully. Figures: The differences between two views of a
