COMMENTS TO AUTHORS

The manuscript provides an overview of the different aspects of pain and its management in relation to orthodontic treatment. The authors are suggested to add a note on the causes of pain and which type of pain is this manuscript referring to. For instance, are the authors concentrating on pain associated with tooth movement only. There can be other causes like trauma and injury. In some areas of the manuscript, the terms pain and discomfort are used together. I feel the two presentations are different and should be discussed separately. A note on various methods for diagnosis of pain can be before the discussion on management and control of pain. Also, I feel this manuscript would attract more readership if it is directed to the dental specialty and consequently published in a dental journal rather than a general journal
