COMMENTS TO AUTHORS

The manuscript by Michiels and coll. is aimed at describing various classifications of five distinct clonal myeloproliferative neoplasms caused by JAK2, MPL or calreticulin mutations. Although of interest for hematologists, this manuscript is hard to be read. -) The manuscript is in fact too long and many historical aspects should be avoided. The reader may be confounded by a lot of details so that a "take home message" cannot be clearly communicated. -) Too many Tables (1-12) encumber the manuscript and should be substantially shortened. -) Finally, The English should be extensively revised due to presence of a lot of refuses and grammar errors

COMMENTS TO AUTHORS

Your article is very good, containing up-to-date information about molecular and pathological data of MPN. However, there are lots of mistakes in writing the article. Mis-spacing, misspelling, etc must be corrected carefully.
