ESPS PEER-REVIEW REPORT

Name of journal: World Journal of Neurology
ESPS manuscript NO: 20140
Title: Challenge of the translational neuroscience
Reviewer’s code: 00646543
Reviewer’s country: Mexico
Science editor: Xue-Mei Gong
Date sent for review: 2015-05-30 21:16
Date reviewed: 2015-06-09 02:58

		<input checked="" type="checkbox"/> No	

COMMENTS TO AUTHORS

The manuscript by Ramos-Zuñiga is interesting as an adequate summary of the current proposals for Translational Medicine in the field of neurological disorders. I have two main suggestions: 1) Punctuation along the manuscript needs to be improved, particularly the end of sentences or paragraphs; this is more evident in pages 5 and 6 where most paragraphs are wrongly broken. 2) I believe that the author misuses the term “neuroscience” in several occasions; As I understand, the term neuroscience applies mostly to basic research related to the nervous system, whereas the term “neurological sciences” applies to the field of medicine, pathology and therapeutics of the large spectrum of brain disorders (mostly in humans). If this is so, in many places of the manuscript the term “neurosciences” is well used, whereas in many others the term “neurological sciences” would be better (e.g. in the case of “clinical neurosciences” or in P7,p5,L4-5, etc.).
