COMMENTS TO AUTHORS

This is a well-written paper. The authors generally focus on the recent development of desmopressin for the treatment of female LUTS. However, I still have several concerns: 1. For reader's better understand, tables are strongly encouraged to summary the clinical reports of desmopressin on LUTS. 2. As a review, it's better to also include the side effects of desmopressin.

COMMENTS TO AUTHORS

This is a very interesting topic upon a novel indication of Desmopressin. Female storage lower urinary tract symptoms are difficult to manage effectively. In the Discussion section a note regarding the established use of Desmopressin in treating nocturnal enuresis could be added. The following relevant reference could be useful to add: Management of nocturnal enuresis in Greek children. *Pediatr Nephrol.* 2005 Sep;20(9):1343-5.

COMMENTS TO AUTHORS

The manuscript reviews the treatment of desmopressin for female storage LUTS. It is meaningful for the clinical application of desmopressin. However, several points should be addressed. 1. The manuscript has no tables and figs. For easy understanding of the content, tables or figs are essential. Please make the manuscript more clear and concise, especially, abstract. 2. Does the data refer to only female patients in Japanese (ref 12, 58 were female), because the manuscript aims at females with storage symptoms, the same as other trials. Please make it clear. 3. The information on each trial involved in the manuscript needs to be well described, such as randomized, double-blind, or others.
