		<input type="checkbox"/> Duplicate publication	
		<input type="checkbox"/> Plagiarism	
		<input checked="" type="checkbox"/> No	

COMMENTS TO AUTHORS

This ms has a number of technical faults that are inherent to prospective, non-randomised trials. However, these problems should be well-understood by the readership and should not obscure the overall message; early started MHT is angioprotective and late starts are more likely to be associated with disease (events, in this instance). The availability of long-term use data is consistent with previous experience and might have been more directly related to the women on ET for post-oophorectomy life.

COMMENTS TO AUTHORS

Small numbers (acknowledged by the authors). No information on smoking status. Please re-examine your database. "Typo" in Table 3 "20-29 years". Do you have records on HT therapy, oral versus transdermal?
